Overhead Door Launches EverServe, the Industry's First Springless Extended Cycle Rolling Service Door

Leading manufacturer paves the way with EverServe by adding significant enhancements that provide 25 times the standard service door cycle life

July 6 2017 - Overhead Door, one of the leading brands of doors and openers for residential, commercial, industrial and transportation applications, has introduced EverServe™, one of the industry's first standard rolling door systems to feature a springless barrel design with integrated shafts and an extended 500,000 cycle life. The EverServe models are ideal for applications exposed to extreme weather, such as parking garages and manufacturing, pharmaceutical, warehouse and distribution facilities. The three models (610S, 620S and 625S) provide customers with high cycle performance, improved security and durability while delivering a reliable system, in addition to minimizing downtime with its ease of serviceability.

“Built on the proven construction of the Overhead Door rolling steel line, EverServe is a trailblazer among performance driven solutions— providing 25 times the standard door cycle life,” said Jennifer Castro, Rolling Steel Product Manager of Overhead Door Corporation. “The innovative springless design eliminates the need for a counterbalance, creating longevity and reliability over an extended time without incurring the cost of unnecessary spring replacements and downtime.”

The EverServe models open and close at speeds of up to 8 - 12” per second, making it ideal for satisfying a wide range of applications and environmental conditions. Additional key features include a floor-level controller for ease of access control, universal components for maintenance and a built-in braking mechanism to enhance safety.

The EverServe doors are offered up to 20’ x 20’ in a variety of slat options including
